IBD NIHR BioResource: Health and Lifestyle Questionnaire- Medications and Conditions

Overview

Identification	IBDNIHRBioResourceHealthandLifestyleQuestionnaire1.6
-----------------------	--

Version	3.0 NBR HLQ
----------------	-------------

Abstract

Most NIHR BioResource participants complete a self-report form on recruitment. Typically this contains e.g. height, weight, smoking history and alcohol consumption, but also includes questions relating to disease history and current medications.

The NIHR IBD BioResource comprises ~34k participants with Inflammatory Bowel Disease (IBD), who provide data for HDR UK Gut Reaction Hub. The IBD BioResource acquires a self-reported health and lifestyle questionnaire from around 70% of participants at recruitment. De-identified versions of this data are available to researchers investigating the feasibility of future studies.
